

Calculus for the Life Sciences

Lecture Notes – Introduction

Joseph M. Mahaffy,
 <jmahaffy@mail.sdsu.edu>

Department of Mathematics and Statistics
 Dynamical Systems Group
 Computational Sciences Research Center
 San Diego State University
 San Diego, CA 92182-7720

<http://jmahaffy.sdsu.edu>

Spring 2017

Outline

- 1 **The Professor**
 - Contact Information, Office Hours
 - TA Contact Information, Office Hours
- 2 **The Class — Overview**
 - Syllabus
 - Grading
 - Expectations and Procedures
- 3 **The Class...**
 - Computer Lab
 - Formal Prerequisites
- 4 **Introduction**
 - Why Math 124 is needed for Biologists
 - Mathematical Models

Contact Information

TA Contact Information

Professor Joseph M. Mahaffy

Office	GMCS-593
Email	jmahaffy@mail.sdsu.edu
Web	http://jmahaffy.sdsu.edu
Phone	(619)594-3743
Office Hours	MW 13-13:50, 15:20-15:50, 17:20-17:50, and by appointment

TA	Derek Moree
Email	dmoree@sdsu.edu
Office Hours	TBA in GMCS 421, and by appointment

Basic Information: The Book

Title:
“Calculus: A Modeling Approach for the Life Sciences”
Volumes I and II

Authors:
Joseph M. Mahaffy &
Alexandra Chàvez-Ross

Publisher:
Pearson Custom Publishing

ISBN:
0-558-17036-6
0-536-90522-3

Basic Information: Syllabus

- Functions and Models
- Discrete Dynamical Models
- The Derivative
- Optimization
- Differential Equations and Integration

Basic Information: Grading

Detailed information is found on the
Homework and Assignment Web Page

- Lecture Material is 70% of grade
 - Lecture Participation, i-clicker (7% of Lecture grade)
 - Homework with WeBWorK (9% of Lecture grade)
 - Weekly HW Quizzes, 3 Exams, and Final (84%)
 - Scientific Calculator (TI-30X) only - HW Quizzes, Exams, and Final
 - 1 3x5 notecard for HW Quizzes and Exams and 3 3x5 notecards for Final
 - No cell phone visible (ZERO on Exam)
- Lab Work is 30% of grade
 - 13-14 Lab assignments
 - 3 Lab Exams worth twice a regular Lab assignment
 - Open notes, Computer (except email), No cell phone

Expectations and Procedures, I

- Lecture class attendance is required for the participation part of the grade — Homework and announcements will be posted on the class web page. If/when you attend class:
 - Please be on time.
 - Please pay attention.
 - Please turn off mobile phones.
 - Please be courteous to other students and the instructor.
 - Abide by university statutes, and all applicable local, state, and federal laws.

Expectations and Procedures, II

- WeBWorK assignments are posted with a specific due date. It is **your responsibility** to complete the assignment on time.
- The instructor will make special arrangements for students with documented learning disabilities and will try to make accommodations for other unforeseen circumstances, *e.g.* illness, personal/family crises, etc. in a way that is fair to all students enrolled in the class. **Please contact the instructor EARLY regarding special circumstances.**
- Students are expected **and encouraged** to ask questions in class!
- Students are expected **and encouraged** to make use of office hours! If you cannot make it to the scheduled office hours: contact the instructor to schedule an appointment! 

Expectations and Procedures, III

- **Missed Exams or Lab Exams: Don't miss Exams!** You will receive a **ZERO** for any missed exam, except for **written/documentated** excuses (illness, personal/family crises, etc.).
- **Lab assignments:**
 - Attendance is mandatory or automatic 10 point deduction
 - Partners are assigned and must work with given partner
 - Arriving 20 minutes late or missing a Lab means working the lab alone
 - Labs due promptly by Thursday 9 PM following a given Lab unless told otherwise.
 - Lowest lab score is dropped
 - Your responsibility to back up Lab work – No excuses accepted or extensions granted for lost material

Computer Lab

- Computer Labs are located in GMCS 421, 422 and 425 – Hours are posted on the Lab doors
- Completed Lab Reports are turned into Math 124 box located in GMCS 421/422
- Software used
 - Excel
 - Word
 - Maple
- Labs are 70% WeBWorK and 30% written report
- **Please direct questions first to your Lab TA**

Math 124: Formal Prerequisites

- Good knowledge of High School Algebra
- Score of 74 or higher on ALEKS exam
- Score of 3 or higher on AP Calculus exam
- Grade of C or higher in Math 141

Math 124: Technology

Design of Calculus for Life Sciences - Math 124

- Lecture and HW
 - Work problems with only Scientific Calculator (TI-30X)
 - Primarily, developing skills through mental activity
 - See **Math Learning** web page (Miscellaneous)
- Computer Lab
 - Manage more complex (realistic) problems and data fitting
 - Use computer programs to help solve these problems
 - Computer Lab problems are linked to Lecture material

Math 124: Introduction

- Biology is rapidly expanding - more quantitative analysis of the data
- Mathematics and computers are more important
- This course in Calculus for Biology
 - Emphasis on mathematical modeling of biological systems
 - Lecture notes show how Calculus naturally arises in biological examples
 - Begin with a biological model
 - Mathematical theory required to analyze the biological problem
- Use real or realistic examples
- Computer labs aid the more complicated models

No Wolfram Alpha

Students find that **Wolfram Alpha** easily manages their HW
Using this for anything but **checking answers** often results in failing the course

Math 124: Introduction — Mathematical Biology

Mathematical Biology

- Mathematical tools
 - Better qualitative and quantitative understanding of biological problems
 - Suggest alternate possibilities
 - Reject inconsistent ideas
- Biological problems
 - Often stretch mathematical techniques
 - Illustrate mathematical tools well
 - Build intuition for problem techniques

Math 124: Introduction — Mathematical Model

So what is a mathematical model?

Math 124: Introduction — Mathematical Model

- A **mathematical model** is a representation of a real system
- It is simple in design
- It exhibits the basic properties of the real system
- The model should be testable against empirical data
- Comparisons of the model to the real system should lead to improved mathematical models
- The model may suggest improved experiments
- Often there is not an exact answer, differing from K-12 training in mathematics

Introduction – Example – Diabetes mellitus

Biological Information

- Metabolic disease characterized by too much sugar in the blood and urine
- β -cells in the pancreas release insulin in response to rises in levels of glucose in the blood
- Stores energy as glycogen in the liver
- Juvenile diabetes (Type I) - failure of the β -cells to release insulin to blood glucose levels – an autoimmune response killing β -cells
- Adult onset diabetes (Type II) results in insulin resistance – cells fail to use insulin properly

Diabetes mellitus – Ackerman Model

Ackerman Model for Diabetes

- Glucose Tolerance Test (GTT)
 - Subject fasts for 12 hours
 - Given a large quantity of glucose
 - Blood sampled regularly for 4-6 hours
- Mathematical Model
 - 2-Component model - Blood glucose and insulin levels
 - Linear system of differential equations (Damped harmonic oscillator)
 - Simple solution with exponentials and trig functions
 - Solution fit to data
 - Parameter values indicate health of subject

Ackerman Model for Diabetes

Glucose Tolerance Test

SDSU

Introduction – Example – Predator-Prey Model

1

Predator-Prey Model

Thanks to Tom and Pat Leeson

SDSU

Example – Predator-Prey Model

2

Predator-Prey Model

- In the early 20th century, Sir Ronald Ross used mathematical modeling to show that malaria could be eliminated without the total eradication of mosquitoes
- A. J. Lotka [1] first studied the population dynamics of predator-prey interactions
- Studies of Vito Volterra on fishing in the Adriatic Sea in 1924 showed value of a simple model for equilibrium analysis
- **Predator-Prey models** are often called **Lotka-Volterra models**
- Widely used by biologists – however, significant flaws in the mathematical understanding often lead to poor conclusions

[1] A. J. Lotka (1912), Evolution in Discontinuous Systems, *Journal of the Washington Academy of Sciences*, 2, pp.2, 49, 66

SDSU

Example – Predator-Prey Model

3

Classic Lynx-Hare Data

- Records of the Hudson Bay Company show that the pelts of the lynx and hares seemed to oscillate with a fairly regular period
- Simple ecological system, as the lynx is a very specialized predator that primarily feeds on snowshoe hares
- Books often **cherry-pick** to show limited data - Model fails badly over the complete data set
- We'll examine this model late in the semester

SDSU

Example – Predator-Prey Model

4

- Graph shows a clear correlation between the populations of lynx and hares
- Rapid rise in the population of the hares is followed by a rapid rise in the lynx population
- Next the hare population plummets, which is followed by lynx population plummeting
